SUMMARY

Frontend / Full-Stack Engineer with 2 years of production experience in React, TypeScript, Redux, Jest, and responsive UI architecture. Built and maintained real-time gaming features across 4 device layouts, contributed to 12+ modular gameplay systems, implemented 8+ complex UI animations, and supported shared features such as Free Chips, Toast Messages 2.0, BetSpot, and game history flows. Beyond production work, built full-stack and modern frontend projects using Spring Boot, PostgreSQL, Redis, JWT, Appwrite, Tailwind CSS, and Redux Toolkit. Experienced in Figma-to-production delivery, reusable component design, MR reviews, stakeholder collaboration, performance-focused development, and AI-assisted engineering workflows for faster debugging, documentation, test case creation, and code quality improvements.

EDUCATION

Vellore Institute of Technology

Bachelor of Technology in Computer Science Engineering

Amaravati, AP, India

2020-24

TECHNICAL SKILLS

Languages: Java, TypeScript, JavaScript, Python

Frontend: React, Next.js, Redux, Preact, Web Components, HTML5, CSS3, Tailwind CSS

Frontend Architecture: Reusable Components, Responsive UI, State Management, Animation-heavy UI, Design Systems

Testing: Jest, Bun, Unit Testing, Integration Testing, Mocking, Test Case Design

Backend: Spring Boot, Spring Security, Node.js, REST API Design, JWT Authentication, API Integration

Databases & Caching: PostgreSQL, Redis, MongoDB, SQL, JPA, Hibernate, Database Design, Query Optimization

Systems & Architecture: System Design, Distributed Systems, Event-Driven Architecture, Kafka, Performance Optimization

Cloud & DevOps: Docker, Git, Maven, CI/CD Basics

Engineering Practices: Code Review, Debugging, Documentation, Product Thinking, Requirement Analysis, AI-assisted Development

WORK EXPERIENCE

Software Development Engineer I

Arrise Solutions, Hyderabad, India

Jul 2024 - Present

- Strong in modern frontend engineering practices, including TypeScript-driven development, performance-aware UI implementation, testing, design-to-code accuracy, product thinking, and AI-assisted productivity with careful code review discipline.
- Owned frontend development for production-level React casino games, building responsive, animation-heavy, and reusable gameplay UI across 4 layouts: desktop, portrait, large portrait, and landscape.
- Implemented stacked toast behavior supporting up to 3 visible toasts with synchronized timers, gesture-based dismissal, fade-out animation, bounce-back handling, action buttons, and responsive scaling.
- Took major ownership of Plinko development across 20+ feature areas, including BetSpot, store setup, and browser-specific fixes. Implemented 8+ gameplay animation flows, including bets open/close transitions, and BetSpot win chip animations.
- Acted as a primary MR reviewer for Plinko, reviewing most project MRs for feature logic, code quality, maintainability, architecture consistency, edge cases, and regression risks before merge.
- Collaborated with Product, Design, QA, Video, and Game Framework teams to clarify requirements, validate Figma flows, resolve stream synchronization issues, and maintain stable delivery across shared core updates.

Software Intern

Arrise Solutions, Hyderabad, India

Jan 2024 - Jun 2024

- Implemented frontend logic for the Free Chips / Free Bet Bonus Campaign, enabling bonus chip-based betting flows across multiple React games and shared frameworks.
- Maintained Free Chips functionality across multiple frameworks by proactively debugging issues, coordinating fixes, and reducing operational risk during campaign-related production changes.

- Revised Privé table entry validation to support 2 balance types — real-money balance and Free Chips — allowing eligible players to access tables when Free Chip value met the minimum requirement.
- Collaborated with 4+ cross-functional teams, including Product, QA, Backend, and Game Framework teams, to clarify API behavior, validate request/response flows, and deliver production-ready releases.
- Built reusable game history UI components with unit tests, improving maintainability and reliability of result views across multiple supported games.

PROJECTS

- **Sneaky** [GitHub - FE](#) [GitHub - BE](#) [Link](#)
 - Built a full-stack fashion discovery platform with 2 applications: React frontend and Spring Boot backend, supporting swipe-based discovery, authentication, wishlist, cart, admin flows, merchant checkout, and recommendations.
 - Developed 20+ API flows across auth, users, products, wishlist, cart, admin dashboard, brands, analytics, recently viewed products, and personalized recommendations.
 - Implemented a recommendation engine using 8+ ranking signals and added Kafka/Redis-based product analytics for 3+ user activity types: product views, cart actions, and wishlist actions.
 - Added Docker Compose support for React frontend, Spring Boot backend, PostgreSQL, and Redis, enabling consistent local development and deployment readiness.
- **Snapgram** [GitHub](#) [Link](#)
 - Built a responsive social media app with 8+ core features, including authentication, post creation/editing, image uploads, feed browsing, profiles, likes, saves, search, and responsive navigation.
 - Integrated 3 Appwrite services: Authentication, Database, and Storage, with 3 primary collections for users, posts, and saves.
 - Used TanStack React Query, React Hook Form, and Zod for server-state management, caching, query invalidation, and type-safe form validation.

CERTIFICATES

- AWS Cloud Practitioner Essentials
- Meta Advanced React

ACHIEVEMENTS

- Solved 350+ DSA problems on LeetCode.
- **Secretary** in Utkal Club —July, 2022 - July, 2023
